First Backlog entry for password game:

Fenna Thijs & Feyza Sayar

#	Name	How to Demo	Notes
1	Display screen	Launch the app; a screen with a password field will open.	*Field says "enter password" - because rules will explain the game and are straightforward, no other instruction is given.*
2	Start up	Start typing, when the first input is entered the first rule will show up.	*In the original game, this rule is usually about the minimal amount of characters.*
3	Typing and checking	The program checks if your password entry is right according to the rule.	
4	Rule complete	Once a rule is completed and checked, a new rule will show up.	*The previous rules won't disappear if changed, but they do have to be checked at new entries.*
5	Rule amount	There will be a maximum of rules, and the game is won when all rules are completed.	*Steps 3 and 4 will be repeated.*
6	Completion and new game	Once the game is won, there will be a "try again" button.	*This removes the entry and starts back at rule one.*
